

## WEI HELPS YOU ACHIEVE ENTERPRISE-GRADE MOBILE DEVICE MANAGEMENT THAT WORKS FOR YOU AND YOUR USERS.

From Break/Fix to employee on-boarding, tablets to desktops. WEI helps streamline and automate your organization's end-user device lifecycles.

### DEVICES BUILT FOR THE ENTERPRISE

Employees have new, more mobile options to keep them productive from wherever they are. But, how does a company embrace users' mobile access from multiple devices without compromising its own enterprise security and data management policies?

**One answer:** Use WEI services to help you. With WEI, you can strike the right balance of end-user freedom with enterprise-level protection.

WEI has the experience to help you in regards to:

- Developing and delivering corporate security-approved devices—to one or 10,000 users
- Image development services, such as the development (or co-development) of "gold standard" corporate images
- Managing the national or global deployment of end user devices with pre-approved corporate images. These might include everything from end-user laptops, desktops and tablets to Apple MacBooks and iPads. This can also include deployment from just a handful of seats to 500 seats, and even, up to multi-thousand-seat environments.
- Developing and automating mobile data management, identity, security and privacy frameworks
- Fleet forecasting, inventory control, device asset management, tracking and lifecycle management
- Fast, Break/Fix repair or replacement services for mobile devices that never risks your enterprise data
- Employee on-boarding, custom web-based device requisitioning and compliance with manufacturer-approved warranty services for device rollout and on-going support in line with security requirements

In short, WEI has the expertise to architect, integrate and deliver end-user devices as a turn-key solution to meet the needs of each customer environment. For the enterprise, this means built-in network domain integration, security and mobile device management. For the end user, this means delivery of a secure, corporate-approved, out-of-the-box device specific to each employee that's ready for use.

## SOLVING YOUR DEVICE NEEDS AT EXACTLY THE RIGHT TIME

WEI experts are accustomed to working with our customers to understand their unique pain points in regards to end-user computing and mobile, then crafting unique solutions to best resolve those pain points.

***The following are a small sample of WEI expertise areas in regards to mobile and end-user computing: IoT, Devices, VDI, Identity & Privacy, Content & Data Management, Personal Cloud, Location Services, BYOD & B2B Services***

## LOCATION SERVICES

It's a fact of life: User devices can be stolen or go missing. There are a number of reasons why you might want to protect what's on them. There are also surprisingly easy ways to track a device, let alone "remote wipe" its contents. Let WEI help you institute processes that bring instant peace of mind.

## IOT

The Internet of Things (IoT) promises to bring amazing new insights but also new security risks for "protected spaces" in corporate networks. From smart devices to sensors and new monitoring applications, WEI helps you prepare for IoT's coming avalanche of new data. WEI helps organizations identify, implement and benefit from IoT projects while reducing your security risk. WEI can also help you deploy IoT-based applications that monitor and report on identity-based behaviors from one or more employee devices.

## PERSONAL CLOUD

As part of WEI's device lifecycle services, WEI can deploy devices with only company-approved enterprise apps, company-approved personal apps and company-approved, third-party cloud services. We can even help you refine and monitor BYOD policies in regards to the secure use of only corporate-approved personal apps.

## VDI

When done correctly, virtual desktop infrastructure (VDI) projects can offer great performance and cost savings. But, there are many big and small ways to derail these benefits. WEI has experience planning, designing and implementing successful VDI projects. Let us help you ensure success.

## BYOD

The revolution caused both new opportunity and some pain for enterprise IT organizations. Today, with the evolution of security and mobile device management (MDM) frameworks, device support can smoothly start and end in the enterprise—with the assurance that enterprise data remains safe and secure regardless of the device in use.

## CONTENT & DATA MANAGEMENT

Your content should remain safe and protected, from whichever device it's accessed. WEI experts can provide enterprise solutions that isolate and protect your sensitive content, independent of the device used to access it. WEI works with you to equip employee devices with the right amount of data/device encryption, antivirus, VPN access, custom applications and, even, cloud subscription services. To help secure your corporate data, our experience covers everything from single sign-on frameworks to remote data wipes.

## MOBILE APP DEVELOPMENT

Need help managing your mobile device assets? WEI experts are skilled in enterprise-level mobile app development for areas such as global asset tracking, device management and enterprise connectivity. If you need a custom, enterprise mobile app, ask WEI how we can help you.

## ABOUT WEI

**WEI is an innovative,  
full service, customer centric  
IT solutions provider.**

**Why WEI? Because we care.  
Because we go further.**

At WEI, we're passionate about solving your technology problems and helping you drive your desired business outcomes. We believe in challenging the status quo and thinking differently. There are a lot of companies that can take today's technology and create a great IT solution for you. But we do more. We go further. And we have the customer, vendor and industry awards to prove it. WEI is a premier technology partner, who always puts our customers first while providing the most innovative solutions for over 25 years.
